

SP 4006-35 TH 60 Project Update for the Public

Anticipated Work for the week April 27th – May 4th

- Centerline from the intersection of TH 14 & TH 60 to 222nd St.
- Centerline and approach culvert removal and replacement from east of Madison Lake to 231st Ave.
- *Note- Centerline culvert work will necessitate the complete closure of TH 60 to the traveling public for safety concerns at these locations.
- Driveway culverts at various locations throughout project. Minimal disruptions to be expected.
- Excavation and Grading work on TH 60 in area of CSAH 44.
- The removal of existing and installation of new utilities in the City of Madison Lake from 7th St. to 3rd St.
- Embankment work to widen TH 60 from east of TWP 310 to east of CR 189.

The public should be aware that as work progresses both in the City of Madison Lake and in the rural locations west and east of the city, that the condition of the roadway is subject to change from within the timeframe of a day. The Department would like to remind the local traveling public that while TH 60 is accessible to local traffic, they should expect delays and closures with minimal advanced warning. The nature of construction work requires flexibility and adjustment with work type and location to assure completion in a timely manner. Please plan on limiting your time on TH 60 and allow time for using a different route to your destination.
